

PROGNOST®-NT Flow of information

Only PROGNOST®-NT related TCP/UDP ports shown below are opened. **All** other TCP/UDP ports are closed by an integrated low level stateful inspection firewall on **all** network cards. All Microsoft ports such as 88, 135-139, 389, 445, 3389 etc. are closed. The Windows services, e.g., „Workstation“, „Computerbrowser“, „RPC“, „SNMP“, „Server“ etc. are **disabled**. In addition, the entire PROGNOST communication (TCP Ports 3333, 3337) is 1024 Bit encrypted for security reasons.
